BY CAMPAIGN — WEEK OF 24 AUG

CAMPAIGN	TYPE	SPEND	% OF SPEND	PURCHASES	REVENUE	ROAS	VS PRIOR WK	COST / PURCHASE
Shopping — All Products	Shopping	\$2,056.87	79%	72.5	\$6,172.61	3.00x	+0.86x	\$28.37
Search — Category Segmented	Search	\$493.28	19%	24.0	\$2,261.38	4.58x	+2.42x	\$20.55
Search — Branded	Search	\$52.69	2%	0.0	\$0.00	0.00x	-1.21x	—
Total		\$2,602.84	100%	96.5	\$8,433.99	3.24x	+1.15x	\$26.97

KILL / KEEP

- SCALE** Search — Category Segmented. Best efficiency in the account at 4.58x on 19% of spend, up +2.42x week over week. Budget shifts here first.
- KEEP** Shopping — All Products. 3.00x, up from 2.14x, carrying 79% of spend and 75% of purchases. Volume engine. No structural change this week.
- KILL** Search — Branded. \$52.69 spent, zero purchases, 73 impressions across the full week. Impression volume this low means there is almost no brand search demand to capture. Paused pending a brand-term audit; last week it returned one purchase on \$66.06.

READ

Spend nearly doubled and revenue more than tripled, so the week is a genuine efficiency gain rather than a budget artefact: cost per purchase fell -19.2% to \$26.97 while average order value rose +25.1% to \$87.40. Higher order value on cheaper purchases is the combination worth defending. Click-through held roughly flat, so the gain came from who converted rather than from more traffic.

Data sources and limits. Spend, purchases, revenue and click data are platform-reported figures pulled from the Google Ads account for the stated dates. Purchases are reported to one decimal because the platform attributes fractional conversions. **MER and new customer share are not shown because they are not connected on this account:** MER requires total store revenue including organic and email, and new customer share requires the Shopify customer feed. Both are wired during build and reported from the first full week thereafter. Revenue on this account is platform-reported conversion value and is not reconciled against Shopify; where reconciliation is in place, a variance line is added beneath Revenue. Client name, product names, campaign launch dates and account identifiers have been removed.
